

Viewing the Universe in Light of Gravitational Lensing

James Nightingale

Overview

- **What is gravitational lensing?**
 - The bending of light due to gravity.
- **Why do we care?**
 - It allows us to study essential **everything** in the Universe.

Overview

Microlensing:

- Weigh stars.
- Find Earth-like planets.
- Detect Dark Matter.

Overview

Strong Lensing:

- Dissect the contents galaxies.
- See the furthest epochs of the Universe.

Overview

- **Weak lensing:**

- Measure the expansion of the Universe.

- Weigh *billions* of galaxies.

What is Gravitational Lensing?

What is Gravitational Lensing?

- **Light bending around massive objects due to their gravity.**

What is Gravitational Lensing?

- **Light bending around massive objects due to their gravity.**

THIS IS WRONG!

An Analogy...

- **Is it analogous to the Sun – Earth orbit?**
 - The Sun's Mass, therefore gravity, pulls the Earth toward it.

An Analogy...

- **Is the analogous to the Sun – Earth orbit?**
 - The Sun's Mass, therefore gravity, pulls the Earth toward it.

$$M_{\text{earth}} = 6 \times 10^{24} \text{ Kg}$$

$$M_{\text{sun}} = 2 \times 10^{30} \text{ Kg}$$

$$r = 1.5 \times 10^8 \text{ m}$$

$$G = 6.67 \times 10^{-11} \text{ N (kg/m)}^2$$

$$F_g = G \frac{m_1 m_2}{r^2}$$

An Analogy...

- **Is the analogous to the Sun – Earth orbit?**
 - The Sun's Mass, therefore gravity, pulls the Earth toward it.

$$M_{\text{earth}} = 6 \times 10^{24} \text{ Kg}$$

$$M_{\text{sun}} = 2 \times 10^{30} \text{ Kg}$$

$$r = 1.5 \times 10^8 \text{ m}$$

$$G = 6.67 \times 10^{-11} \text{ N (kg/m)}^2$$

$$\mathbf{F_g = 3.5 \times 10^{22} \text{ N}}$$

$$F_g = G \frac{m_1 m_2}{r^2}$$

An Incorrect Analogy

- **Is the analogous to the Sun – Earth orbit?**
 - The Sun's Mass, therefore gravity, pulls the Earth toward it.
- **But... Light has no mass?**

$$M_{\text{light}} = 0 \text{ Kg ?}$$

$$M_{\text{sun}} = 2 \times 10^{30} \text{ Kg}$$

$$G = 6.67 \times 10^{-11} \text{ N (kg/m)}^2$$

$$\mathbf{F_g = 0 N}$$

$$F_g = G \frac{m_1 m_2}{r^2}$$

General Relativity

- **Unified space and time into one geometry – 'space time'.**

General Relativity

- **Unified space and time into one geometry – 'space time'.**
- **Showed light always travels in straight lines in '*spacetime*'.**

General Relativity

- **Unified space and time into one geometry – 'space time'.**
- **Showed light always travels in straight lines in *spacetime*.**
- **HOWEVER, spacetime is bent by gravity.**

General Relativity

General Relativity

Observing General Relativity

- **Eddington photographed the sun in a solar eclipse in 1919.**

Observing General Relativity

- **Eddington photographed the sun in a solar eclipse in 1919.**
- **First observational evidence for General Relativity.**

So... What is Gravitational Lensing?

- Light bending around massive objects due to their gravity.

THIS IS WRONG!

- Light travelling in straight lines through curved space time.

Finding Strong Lenses Is Tough...

- The probability of an object in modern surveys being a strong lens is around 0.01%

Finding Strong Lenses Is Tough...

- The probability of an object in modern surveys being a strong lens is around 0.01%
... and there are **a lot** of galaxies.

Finding Strong Lenses Is Tough...

Strong Lensing – Whats in a Galaxy?

Strong Lensing – Dark Matter

Strong Lensing – Dark Matter

Strong Lensing – Dark Matter

Strong Lensing – Viewing The Past

- If one Galaxy is a Lens the lensed source arc is around 1 "
- This gives a magnification of around 5-50.

$\langle \quad \rangle$
1 "

Strong Lensing – Viewing The Past

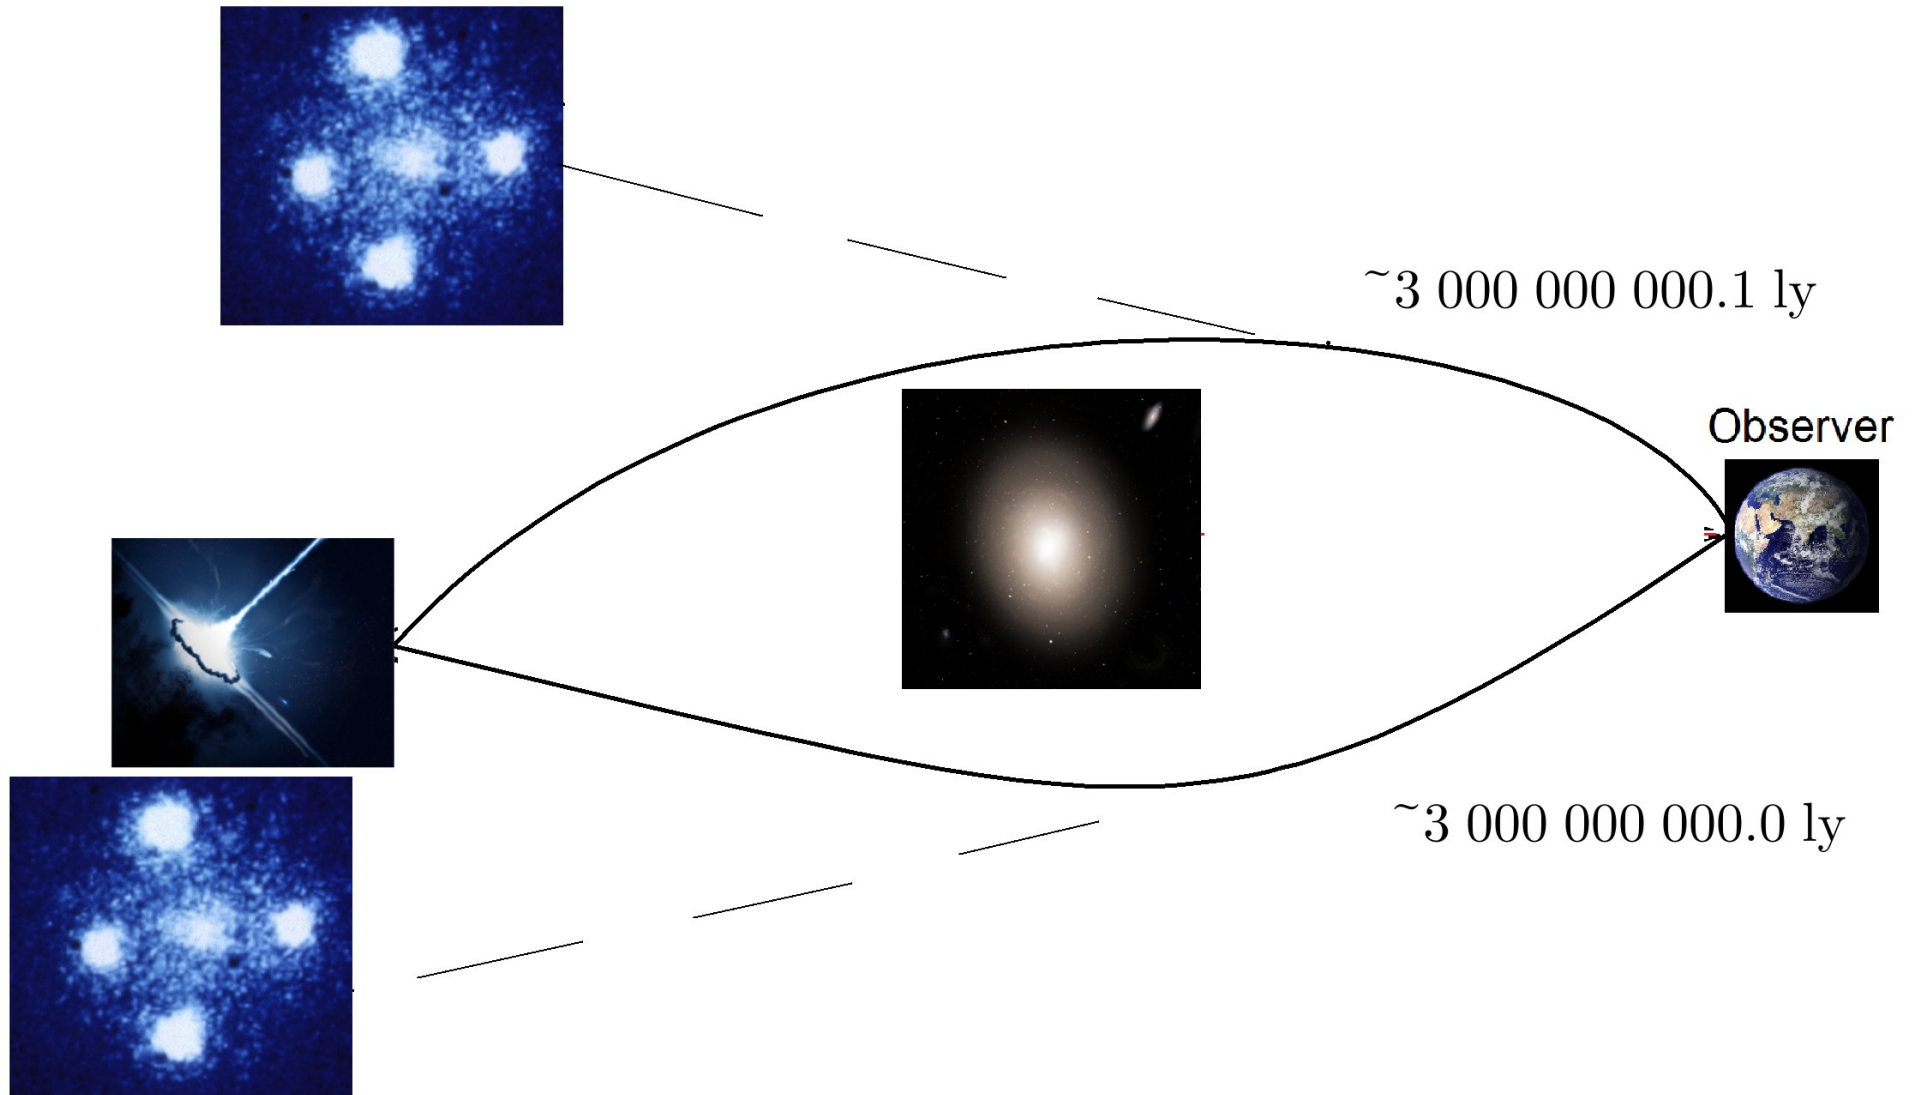

- For two galaxies the arc is around $2 - 5''$
- This gives a magnification of around 50-200.

Thank You and Questions!

Microlensing – Dark Matter

Baryonic Matter

- **Baryonic matter primarily interacts via the Coloumbic force.**
- **Negative and positives forces attract and repel one another.**
- **Gravity, although present, is insignificant.**

Dark Matter

- **The dark matter particles interacts only via gravity.**
